

KEJAL RANKA

Senior Data & AI Engineer | Analytics Architecture | AI-Powered Data Products
rankakejal.600@gmail.com | +91-9420830600 | linkedin.com/in/kejal-ranka | rk600.github.io/kejal-ranka.github.io

Senior Data & AI Engineer with 5+ years building production analytics systems and AI-powered data products at scale. Expert in cloud data warehousing, high-performance SQL, ETL architecture design, and applying AI/LLMs to solve classification and enrichment problems on unstructured data. At Amazon, own end-to-end analytics for EU marketplace programs — 7 platforms serving 800+ users, \$73M cost optimization, and a production AI pipeline classifying 18,000+ records daily using RAG + few-shot learning. Track record of redesigning data architectures, discovering hidden analytical biases, and building novel metric frameworks. AWS Certified AI Practitioner.

TECHNICAL SKILLS

SQL: Advanced — window functions, CTEs, query optimization, partitioning, performance tuning at billion-row scale

Python: pandas, NumPy, NLP pipelines, ETL automation, data processing, Lambda functions

Cloud & Data: AWS Redshift, S3, Glue, Athena, Lambda, SageMaker, Bedrock, DynamoDB, QuickSight

AI as a Tool: LLM integration (Bedrock/Claude), RAG pipelines, vector embeddings, text classification, sentiment analysis

Data Engineering: End-to-end pipeline design, modular architecture, event-driven systems, data quality SLAs, CI/CD, Agile

Visualization: QuickSight (enterprise-scale), Tableau (Desktop Certified), IBM Cognos, interactive HTML dashboards

EXPERIENCE

Business Intelligence Engineer | Amazon | June 2024 – Present

EU FBA Analytics — SX

- Architected **7 analytics platforms** (800+ monthly users, 50+ stakeholders) as single source of truth for EU executive decision-making across 6 programs
- Designed multi-dimensional seller segmentation model driving **\$73M** cost optimization (+49% vs target) — adopted org-wide within 3 weeks; directly influenced resource allocation for 200+ person program
- Built production AI pipeline (**18K records/day**): event-driven architecture (S3 → Lambda → SageMaker → dashboard) with self-improving RAG system (222 gold examples, vector similarity) achieving 91% accuracy — enabling product leadership to identify top pain points without manual review
- Redesigned monolithic data architecture into modular pipeline framework (**14+ jobs**): eliminated code duplication, reduced new feature onboarding from months to weeks, enabled granular attribution previously impossible
- Discovered and resolved **systematic measurement bias** where 2+ month lead times skewed performance metrics — switched calculation logic, unblocking \$5M+ in stalled business decisions
- Developed novel composite scoring framework (**Efficiency Score**) measuring intervention effectiveness — improved program-wide performance from 21% → 28% YoY; adopted as org-wide KPI and influenced 2026 goal-setting
- Automated executive reporting (WBR/MBR/QBR) saving **234+ hours annually**; unified 6 fragmented data sources into single automated dashboards serving L7/L8 leadership
- Led cross-system data investigation resolving **\$23M** categorization discrepancy across 23M units; standardized methodology across 5 teams
- Led AI enablement: 8 workshops, **60+ engineers** trained, 10 prototypes shipped to production; recognized GenAI Champion

System Engineer — Data Analytics | Tata Consultancy Services | Oct 2020 – June 2024

PMO & Operations Analytics for Citibank — Global Enterprise Programs

- Spearheaded end-to-end development of automated Tableau dashboards, reducing report preparation time by **75%** and saving 20+ man-hours weekly through streamlined reporting processes
- Led a team of 3 analysts in PMO function optimization, resulting in **40% faster** decision-making cycles while managing analytics projects that drove 15% revenue growth
- Architected ETL workflows processing **200GB+** daily data with 99.9% accuracy, leveraging IBM Cognos for schema-level data extraction and business intelligence reporting
- Established comprehensive data flows and KPI frameworks through cross-functional collaboration, delivering actionable insights that improved operational efficiency by **25%**
- Implemented continuous improvement initiatives in data processes, resulting in **30% reduction** in processing time through automated validation checks

CERTIFICATIONS

AWS Certified AI Practitioner | Tableau Desktop Certified Professional | Google Data Analytics Professional Certificate

EDUCATION

B.Tech — Instrumentation & Control Engineering | Nirma University, India | GPA: 8.42/10 | Ranked 3rd in Program
